ACS manufactures mouthpieces for breath alcohol testers and alcohol interlocks. Use of these single-use pieces is critical to maintain hygiene and to protect the sensitive inner workings of any tester.

95-000250

### Round

Popular ergonomic design for use with most breath alcohol testers. Features a sputum trap to protect the device from excess moisture.

95-000121

### Square

Popular style for use in most breath alcohol testers. Features a sputum trap to protect the device from excess moisture.

95-000130

### Pressure tube

Multifunctional and designed to be used with a variety of manufactured testers featuring precise flow and pressure.

95-000131

### Straight tube

Designed for breath alcohol testers which do not have the air flow pressure requirements.

95-000133

### SD tube

Special design for use in newer portable testers that require specific breath pressure to actuate the sensor.

95-000141

### R-flow

Used with most breath alcohol testers to provide a check valve which prevents suck back during the testing process.

95-000145

### Oval

Special hygienic design for use with the new G Series Interlocks and DRIVESAFE™ testers.

95-000149

### Asiv

Designed specifically for use with Alco-Sensor IV roadside screening devices. Features a check valve to prevent suck back during the testing process.

95-000255

### Safir

Designed specifically for the SAF'IR™ Evolution.
